What's New in the AutoCAD?

User feedback (or “intellectual property” or IP) is a critical component of a company’s competitive edge, both in the global marketplace and within the organization. The efficiency and overall quality of work teams also depend on teams’ ability to quickly incorporate, and respond to, feedback. Many modern design tools, however, are not yet equipped to incorporate the latest IP into your designs. Instead, you must add your feedback manually, which slows you down and potentially creates errors. AutoCAD has never been one of them. In the past, AutoCAD’s markup language, DXF, supported a subset of drawing and IP elements, along with basic XREF functions for exporting your drawings to common file formats. But AutoCAD’s markup language, DXF, has evolved since it was introduced in AutoCAD 2002. DXF 1.1 introduced the XML markup language and the XLM protocol to support a broader range of design elements, and DXF 2.0 improved XREF functions and laid the groundwork for continued evolution. In AutoCAD 2023, we’ve taken our DXF 1.1 and DXF 2.0 functionality, added in-document feedback, and integrated it into a single user interface: Markup Assistant. This is a full-featured feature, and we want you to try it out! The entire process is intuitive. After you’ve created a drawing and added Markup Assistant to the new Markup pull-down menu, you can import a paper document, paste an image into a drawing, or email it to yourself. When you do, you can instantly incorporate your feedback into your drawing by simply clicking the Markup Assistant icon. Whether you’re an AutoCAD beginner or an expert, you’ll find it easy to add feedback from a paper document, PDF, or JPEG to your designs. Now, you can: Efficiently integrate and update your designs in the AutoCAD environment: Extract, import, and incorporate feedback from your designs using Paper, PDF, JPEG, and Microsoft Office files. Easily add comments, annotations, and editing marks to your drawings, allowing for peer review, as well as for team collaboration and revision control. Efficiently send and receive feedback: Integrate feedback from comments, paper
