May i know how to solve this? A: Replace with The tag has no end tag. You'll have to dig a bit more into the code to understand why, because the HTML generated by a tag depends on its siblings. Various methods have been studied to remove adhesives from organic films. However, the above-described methods have problems of low efficiency, low selectivity, high costs and the like. For example, a method has been proposed in which a certain solvent is sprayed on an adhesive attached to a substrate, and then the solvent is made to adhere to the adhesive by allowing the solvent to come into contact with the adhesive (Japanese Laid-Open Patent Publication No. 2006-101894). According to this method, the adhesive can be removed without contacting with the substrate. However, the method has a problem in that, for example, when the solvent is a general-purpose solvent such as toluene or acetone, the solvent must be volatilized at relatively high temperatures of about 100° C. to about 140° C. to achieve sufficient effects. Moreover, a method has been proposed in which a solvent is brought into contact with an adhesive with a porous film interposed therebetween to remove the solvent from the adhesive. In this method, the adhesive need not be heated, and removal can be achieved at relatively low temperatures, for example, temperatures in the range of about 100° C. to about 180° C. In this case, the porous film does not need to be peeled from the adhesive after removal. However, the method has a problem in that the porous film itself is very difficult to remove from the adhesive, and the adhesive layer must therefore be peeled off by another method. Further, a method has been proposed in which a certain solvent is sprayed on an adhesive attached to a substrate, and then the solvent is made to adhere to the adhesive by allowing the solvent to come into contact with the adhesive (Japanese Laid-Open Patent Publication No. 2005-168794). In this method, the substrate is protected against the solvent. However, this method has a problem in that the adhesive attached to the substrate cannot be
