I wonder how long it will take for the gurus to figure out that the changes to the PSD file format on the Mac as of CS6 are incompatible with Photoshop CS8. I thought the incompatible changes were plainly stated in the manual. Guess they were not. An old, old PSD file can be opened in CS8 but the file retains all of the old numbering and properties. When I first discovered the new Fd. Curves, similar to what we were able to do with Image Trace, it sounded really cool. Sadly it does not work like I hoped. Sometimes it works for some frames, then stops working on other frames. I would love to have a composite like the Forescuure Lookup effect, but alas, it is not possible... I've never been a fan of the new grid tool, but now that Adobe has made the grid snap to the pixels, Photoshop has somewhat put a notch in my blogging -- I used to work in size comparison photos for my blog, now I've gotta always remember to reset the grid settings whenever I open an image in Photoshop. Of course, it would've been a whole lot easers if they could've just incorporated the size comparison in Photoshop's 12pt grid. Stability. LR5.1 had so many crashes and crashes so fast, I used to run in developer mode just to see the layers in action, then I discovered another problem. All that new garbage (those previews, and layer layers??) in PSD files would just evaporate and vanish out from under me while I was working. They might have been okay after a photo shoot, but that is way too unstable for everyday. When I finally got my data backed up, I wiped the hard drive clean and started my journey anew. I installed LR5.2 and ... it crashed so hard it was like I was in the middle of a nursery school circus. All the crooks, jokers, and clowns were dancing and singing, "Look at everyone, look at everyone, look at everyone!" LR5.2 is a dangerous program, and it — like all programs — has a dumb release note that says "the latest features are now available free! You can download them from here ... and here ... and here ... and maybe ... also from here." (<http://helpx.adobe.com/photoshop/using/—... using.html>)
